Can a fluidized bed be heated with clean electricity?

Fluidized beds heated via fossil fuel combustion have been widely used in industry for various applications. Heating these fluidized beds with clean electricity is emerging as a promising solution to reduce greenhouse gas emissions, improve overall energy efficiency, and for some applications, improve product quality.

What is a fluidized bed energy storage system?

Fluidized bed energy storage systems are an emerging technology, but they have the potential to be used in a variety of industrial applications. Typically, these systems use a fluidized bed of solid storage material, such as sand or pellets, to store thermal energy.

Who makes fluidized bed energy storage systems?

Vattenfall, Enwave Energy, Fortum, Danfoss, Danstoker, and Bosch have developed fluidized bed energy storage systems for district heating and cooling systems. Fluidized bed energy storage systems are particularly suitable for concentrated solar thermal technologies. (264,265)
