

There is a gotcha in that some electrical equipment's listing is for part of an assembly; you can not use any of those in your field assembled cabinet without a certification. I then asked whether assembling the cabinet in the shop and transporting it to the customer's site for installation is OK and he was a bit non committal.

An electrical enclosure is a box composed of steel, stainless steel, or aluminium that protects electronic equipment from ambient conditions, prevents electric shock, and shields sensitive parts from electromagnetic and radio frequency ...

The electrical cabinet's enclosure design should provide adequate room and simple positioning for future maintenance and expansion. The enclosure's dimensions and apertures should be designed to provide simple access to interior components while also leaving enough space for future additions or replacements of current components.
