

Energy storage field development co ltd

What is Field's Battery energy storage system?

Field's battery energy storage systems allow energy generated during times of lower demand to be stored and released to the grid during times of higher demand. Field is already operating its first site in the UK, a 20 MWh battery project in Oldham, Greater Manchester.

Why should you invest in a battery energy storage project?

We have a proven track record of working at speed to secure transactions and final project delivery. Our aim is to develop battery energy storage projects that deliver significant sustainability benefits in addition to reducing climate change emissions and facilitating the growth of renewable energy.

How will field's energy infrastructure be optimised in 2021?

The charging and discharging of energy will ultimately be optimised using Field's proprietary platform. Since its 2021 launch, Field has already acquired a pipeline of 110MW of storage capacity, including acquired sites in Oldham (20MW), Gerrards Cross (20MW), Auchterawe (50MW) and Newport (20MW).

In July 2022, supported by Energy Foundation China, a series of reports was published on how to develop an innovative building system in China that integrates solar photovoltaics, energy ...

Abstract: According to the energy storage demands of short term and high frequency in the wind solar new energy grid, this paper focuses on the demonstration application researches of the ...

The funds raised will be used to support Field in its build-out of battery storage in the UK, which is critical for energy security and decarbonisation, providing flexibility to the ...
