

Energy storage in the next five years

Solar. In 2024, generators added a record 30 GW of utility-scale solar to the U.S. grid, accounting for 61% of capacity additions last year. We expect this trend will continue in 2025, with 32.5 ...

Explore the top innovations in residential battery storage expected over the next five years. Learn how solid-state batteries, AI-driven management, second-life solutions, and ...

This report comes to you at the turning of the tide for energy storage: after two years of rising prices and supply chain disruptions, the energy storage industry is starting to see price ...

Constrained by carbon neutrality and carbon peaking targets and enveloped by a bullish backdrop of declining system costs, the global installed capacity of wind and solar ...

Lithium-based batteries power our daily lives from consumer electronics to national defense. They enable electrification of the transportation sector and provide stationary grid storage, critical to ...
