# Energy storage industry oversupply

Why is energy storage oversupply a problem?

The expansion is driven mainly by local governments and lacks coordination with new energy stations and the power grid. In some regions, a considerable storage oversupply could lead to conflicts in power-dispatch strategies across timescales and jurisdictions, increasing the risk of system instability and large-scale blackouts.

Will energy storage grow in 2024?

The energy storage sector maintained its upward trajectoryin 2024,with estimates indicating that global energy storage installations rose by more than 75%,measured by megawatt-hours (MWh),year-over-year in 2024 and are expected to go beyond the terawatt-hour mark before 2030.

Is excessive energy storage a problem?

Spyros Foteinis highlights the acknowledged problem that an insufficient capacity to store energy can result in generated renewable energy being wasted (Nature 632, 29; 2024). But the risks for power-system security of the converse problem -- excessive energy storage -- have been mostly overlooked.

Will energy storage growth continue through 2025?

With developers continuing to add new capacity,including 9.2 GW of new lithium-ion battery storage capacity in 2024 through November 2024 and comparable levels of growth expected through the fourth quarter of 2024,energy storage investments and M&A activity are expected to continue this trajectory through 2025.

Is excessive energy storage a threat to China's power system?

But the risks for power-system security of the converse problem -- excessive energy storage -- have been mostly overlooked. China plans to install up to 180 million kilowatts of pumped-storage hydropower capacity by 2030. This is around 3.5 times the current capacity, and equivalent to 8 power plants the size of China's Three Gorges Dam.

How has the IRA impacted the energy storage industry?

The energy storage industry has continued to progressover the course of 2024 and into 2025,buoyed in significant part by the federal income tax benefits in the form of tax credits enacted under the IRA. Energy storage was one of the major beneficiaries of the IRA's new rules on both the deployment and manufacturing sides.

The energy storage sector maintained its upward trajectory in 2024, with estimates indicating that global energy storage installations rose by more than 75%, measured by megawatt-hours ...

Energy storage industry market profitability Investmentin Designing and Manufacturing of BESS Devices to Play a Significant Role in Industry Dynamics Various industry players are constantly ...

Webull Financial LLC is a member of the Financial Industry Regulatory Authority (), Securities Investor Protection Corporation (), The New York Stock Exchange (), and Cboe EDGX ...

This white paper offers insights into the current situation and forecast for the wind, solar, and energy storage markets, including the levelized cost of electricity (LCOE) calculation ...

Moreover, a large number of battery manufacturing announcements targeted exclusively at the energy storage system (ESS) industry will lead to oversupply and highly competitive market ...
