What efficiency metric does a water cooled chiller use?

It is the amount of energy required to do it. For water-cooled chillers, common units are kwh/ton and coefficient of performance, COP. For proper electrical sizing and energy code compliance, full load efficiency is a key efficiency metric. For code compliance, there is also a part-load efficiency metric (IPLV or

What is a cool TES energy storage media?

The most common Cool TES energy storage media are chilled water, other low-temperature fluids (e.g., water with an additive to lower freezing point), ice, or some other phase change material. Cool TES technologies shift electricity use by decoupling chiller operation from instantaneous loads.

What temperature should a condenser water system be cooled to?

Best practices Use the ASHRAE GreenGuide's suggestion of 12 to 18°F for condenser-water systems (2.3 to 1.6 gpm/ton) to reduce plant installed and life-cycle costs. Consider varying cool

What temperature does a water chiller store water?

Chilled water systems typically store supply water at 39°F to 42°F, which is compatible with most water chillers and distribution systems. Return temperatures are typically in the range of 55°F to 60°F or higher. Stratified low-temperature-fluid TES systems operate similarly but with lower supply temperatures, typically between 29°F and 36°F.

How many pipe diameters should a chiller have?

10 pipe diameters's worth of length. This decouples pressure and flow while preventing unintended mixing of the supply and return chilled water streams. With chillers in parallel, select for equal or nearly equal pressure drop. Flow and load will divide equally across all operating chillers. Select chillers for a sufficient

What ft/sec should a chilled water coil be?

In general, this is a consistent trend. Impact of laminar flow. The ASHRAE Handbook suggests that chilled-water coils are best selected with water velocity between 2 to 4 ft/sec, at design conditions. This recommended range is intended to provide a good balance between coil size and min
