

Energyhub com Comoros

Is the Comoros transitioning to res?

The Comoros, like Madagascar, Mauritius, and Reunion, has recently focused its efforts on the transition to renewable energy sources (RES) throughout its territory. This paper provides policymakers with a comprehensive overview of the energy situation in the Comoros.

Should Comoros abandon its monolithic energy governance?

Comoros, like many small islands, should consider changing its monolithic energy governance due to its structural heaviness. The territory needs to adapt quickly to face the challenges of transition. Comoros's energy vulnerability is threefold.

What is the energy vulnerability of Comoros?

Comoros faces energy vulnerability for three reasons. The first issue is the high cost (0.24 EUR/kWh) of carbon-based electricity, which is attributed to a poorly performing distribution network. This leads to more than 40% losses, making it the highest cost in the area.

What is the cost of electricity in the Comoros?

The cost of electricity in the Comoros is 298 USD/MWh for the consumer, despite the high production cost of approximately 595 USD/MWh. The population is ready to pay for access to electricity.

Is the Comoros fully electrified?

The Comoros is not yet fully electrified. In the case of the Comoros, the territory does not have systematic access to drinking water and its level of development is very low with an HDI of 0.503 for the year 2017.

Why should you use EnergyHub?

Access the data and reports you need for accurate forecasts and to confidently call and evaluate events. EnergyHub provides next-level value by pairing our industry-leading Edge DERMS platform with comprehensive service offerings integrated at our core.

In 2018, Salt River Project (SRP) and EnergyHub partnered on a Bring Your Own Thermostat (BYOT) pilot. In four years, SRP has transformed their demand response (DR) program from a pilot to a valuable part of the resource stack. They can now call on over 67,000 devices that consistently provide 82 MW of load flexibility, and at times much more.

Combining the advanced grid optimization capabilities of GE Vernova's GridOS[®]; DERMS with the comprehensive control capabilities of EnergyHub's DERMS for grid-edge DERs presents many opportunities for utilities to unlock energy storage capacity, strengthen DER management, and optimize the grid.
