

Is Ethiopia a green country?

Ethiopia is home to abundant renewable energy sources, including hydroelectric, wind, solar, and geothermal. With the potential to generate over 60,000 megawatts (MW) of electric power from these sources, the country is striving to become a regional leader in green energy.

Is Ethiopia pursuing a green energy revolution?

Ethiopia is pursuing a green energy revolution by developing its renewable energy sources, such as hydro, wind, solar, and geothermal. However, the country faces some challenges and conflicts, especially over the Nile waters.

Is solar energy a good source of energy for Ethiopia?

Solar energy is another promising source for Ethiopia, as the country receives an average of 5.5 kilowatt-hours of solar radiation per square meter per day. The country has the potential to generate more than 5,000 MW of solar power and has already installed some solar plants and mini-grids in rural areas.

Which sector consumes the most energy in Ethiopia?

All in all, energy consumption in Ethiopia continues to be dominated by the residential sector which accounts for 95% in 1990 and 88% in 2018. During the same period, the shares of industry and transport sectors grew, respectively, from 1.3 to 3.7%, and from 1.8 to 5.5%.

Can energy transition support the SDGs in Ethiopia?

Ethiopia is endowed with a variety of renewable energy resources. This enormous potential however remains largely unexploited. Energy poverty, inefficiency, and insecurity are still major challenges. Energy transition could support almost all SDGs in the country.

Why is energy transition important in Ethiopia?

Energy transition is also one of the major topics in Ethiopia's international development and trade cooperation as it is linked with climate finance, loans and grants, foreign direct investment, and knowledge and technology transfers [ , , ].
