

What are the different energy sources used in France?

Discover the different energy sources used in the country, including fossil, nuclear and renewable energies. Commented tables help you understand the French energy system, its evolution and its action in favor of the climate. Exercises and suggested educational activities complete this fact sheet.

What type of power does France have?

France's installed electricity generation capacity is mainly made up of nuclear, hydroelectric and fossil-fired power plants, as well as renewable power plants (wind, solar photovoltaic, biomass). French power production continues to change in 2022 and 2023, driven by the growth in renewable energy sources.

What is France's energy mix?

The graph represents the evolution of France's energy mix, with an annual and monthly view of electricity generation in France, overall and by technology. The French energy mix is essentially made up of nuclear, hydroelectric and fossil-fired power plants, as well as renewable energies (wind power, photovoltaic solar power, biomass).

Does France have a low-carbon energy mix?

France has a low-carbon electricity mix owing to its nuclear fleet, yet many reactors are reaching the end of their lifetime. The country has started an ambitious energy transition by designing a national low-carbon strategy, carbon budgets, a carbon

Why is France a big exporter of electricity?

The country is also among the world's biggest net exporters of electricity. The country is increasingly investing in renewable energy and has set a target of 32% by 2030. In its 2021 Country report on France, the International Energy Agency warned that the country is recording delays in terms of meeting its own energy and climate goals.

Does France have a green energy strategy?

France does have a strategy for increasing the use of green energy. Green energy is a centerpiece of the country's "France Relance" economic recovery efforts. The French government plans to reduce nuclear in the energy mix for electricity production from over 70 percent to 50 percent by 2035 and increase the role of renewables.

Jules Nyssen, President of Syndicat des énergies renouvelables (SER) ; The first step was to move to renewables, the second step is now to move to smart systems, to match different energy sources to needs.
