Depending on the mount you have, screws or strings secure the TV to the bracket on the wall. With the bottom of the TV tilted forward, you won't have any problem seeing these components. If you don't see any strings hanging from the mount's sides, you'll know you need a screwdriver right away.

Then, unscrew the fan from its ceiling bracket. Disconnect the wires attaching the fan to the bracket and set the fan aside. To remove the bracket from the ceiling, unscrew the 2 screws securing it to the ceiling. It's best to put the screws back into the ceiling once you've removed the mounting bracket so you can use them in the future.

Remove the brackets and fill the holes if you aren't replacing the blinds. Use a screwdriver to remove the small screws attaching the brackets to your wall. To hide the holes, use a putty knife to apply plaster or joint compound. Paint over it once the surface is dry.

Locate the screws or bolts that attach the mounting bracket to the ceiling. These screws or bolts are usually located on the outer edge of the bracket. Using a screwdriver or wrench, carefully loosen and remove the screws or bolts from the bracket. Make sure to support the bracket as you remove the hardware to prevent it from falling.

This is the most comprehensive solar panel mounting video article, including videos of various mounting brackets. For example, how to use the balcony to install solar panels. This includes iron sheet/ground roof solar panel bracket ...
