Why is Iran Facing a power blackout?

The start of rolling power blackouts in Iran this week amid critical fuel shortages has exposed the vulnerability of the oil-rich country to US sanctions and underscored the impact of years of under-investment. Iran has the world's third-largest oil reserves and second-largest natural gas reserves.

Why is Iran Facing a gas crunch?

The gas crunch adds to the growing list of strains on Iran's economy. The country is one of the world's biggest oil and gas producers, but has been plagued by significant energy shortages caused by years of US sanctions and chronic under-investment in power infrastructure. The government is also under pressure internationally.

Why does Iran have a shortage of electricity & gas?

Chronic under-investment in infrastructure exacerbated by US sanctions as well as mismanagement and huge state subsidies -- which encourage high fuel consumption and overburden the cash-strapped state -- have left Iran with worsening shortages of electricity, gas and petrol.

Will Iran face a natural gas shortage this winter?

This winter, Iran is expected to face a daily shortfall of 260mn cubic meters of natural gas. "The imbalance will keep growing unless we resolve our problems with the world," Behrouzifar said. Data visualisation by Alan Smith Copyright The Financial Times Limited 2024.

How much energy did Iran spend in 2022?

According to the IMF, Iran spent \$163bn in explicit and implicit energy subsidies in 2022, which amounted to more than 27 per cent of GDP -- the highest share of the economy of any country in the listing.

Could a follow-up attack on Iran's oil industry spell trouble for OPEC?

(Ukraine has taken the war to Russia's oil patch in a bid to hit the Kremlin where it hurts.) Any follow-up attack on Iran's oil industry could spell trouble for a market that is just managing to get by without much help from OPEC or its members.
