

Isle of Man csa energy infrastructure

What is the local infrastructure on the Isle of Man?

The local Infrastructure on the Isle of Man including information on communications, education, energy & water and highways.

Why does the Isle of Man export electricity from the CCGT?

GB is often short of dispatchable generation when intermittent renewables are not available, allowing the Isle of Man to export electricity produced from the CCGT. Emissions from electricity generated in the Isle of Man are attributed to the Island's Greenhouse Gas inventory, even if this power is exported for use in the UK.

Could the Isle of Man re-import electricity from an offshore wind farm?

With interconnectors the Isle of Man could re-import electricity generated from an offshore wind farm, allowing GB to manage the balancing. This would likely result in much lower costs to consumers. CFDs are not currently open to the Isle of Man as it is not part of the UK.

Can wind power be exported from the Isle of man to GB?

Given the high proportion of wind being installed in both UK and Irish waters over the next ten - thirty years (see Fig. 9 and Fig. 10) there may be limited opportunity to export power generated from offshore wind from the Isle of Man to GB, if it has to be brought onto the island first.

Can Isle of Man export electricity to GB?

There is also limited opportunities for Isle of Man to export electricity to GB, due to the excess capacity of renewable generators expected to be in operation by 2050. Isle of Man assets also have an 11% CAPEX uplift compared to equivalent UK installations, due to labour, available skill-set, transport and economies of scale.

Can the Isle of Man provide stabilising power to GB or ROI?

Opportunities for the Isle of Man to provide stabilising power to GB or ROI from a large-scale baseload power station, e.g. biomass or a small modular reactor? Neither option is without challenge, but likely provide the greatest potential for export. These options have not been explored in the analysis.
