What is Jamaica's energy source?

This page is part of Global Energy Monitor's Latin America Energy Portal. Oil and natural gas continue to supply most of Jamaica's energy, supplemented by significantly smaller contributions from renewables. As of 2020, nearly 89% of electricity was still generated by fossil fuels.

Is Jamaica following the National Energy Policy 2009-2030?

Jamaica is currently following the National Energy Policy 2009-2030. Jamaica's December 2020 update to its NDC (Nationally Determined Contribution) aims to reduce greenhouse gas emissions by more than 25% relative to business as usual levels by 2030, with the majority of reductions coming from the energy sector.

Why is electricity inexpensive in Jamaica?

Jamaica's electricity is inexpensive due to the fact that more than 94% of the island's electricity is generated from petroleum-based fuels. This leaves Jamaica highly dependent on imported fossil fuels and vulnerable to oil price and currency exchange fluctuations that directly impact the cost of electricity.

Does Jamaica use solar power?

Jamaica has yet to see large-scale development of solar power, with no utility-scale facilities installed to date. However, there are notable solar installations, such as the 1.6-MW rooftop array at the Grand Palladium Jamaica Resort & Spa and the combined 500 kW installed across 33 facilities by the Jamaica Broilers Group.

Does Jamaica have coal?

Jamaica has no coal reserves and does not produce coal. Historically it has imported coal, but other fuels such as natural gas are gaining ground, and proposed coal plants, such as Jamalco Power Station, have been repurposed due to concerns over coal usage.

The broad expanse of Kingston Harbour separates the two. For nearly 200 years (1494-1692), Port Royal not only served as the seat of colonial power in Jamaica, it was also the largest city in the Caribbean. Chief among its defenses was a collection of forts. Fort Charles was one of them. Initial Construction and Name Changes
