The evolution of the tried and tested D5 500kg gate motor for domestic and light-industrial applications. Incorporating battery backup you can bank on, potent push force and an intelligent LCD controller for easy setup, not to mention a plethora of features all tailor-made for the ultimate in security and convenience, the CENTSYS D5-Evo is the apex predator of gate motors - it ...

To put it simply, a solar charge controller regulates the power that's transferred from a solar panel to a battery. It's important to use a charge controller as it improves the efficiency of a solar-powered system by up to 50%, can prevent the batteries from being overcharged, and will extend the battery's life when used correctly.

If a 100-Watt solar panel is used to power a battery, a solar charge controller is necessary. Some small solar systems include only a single 100-watt panel and a battery. These systems need solar charge controllers to regulate the current entering the battery. Are Charge Controllers Needed for 7-Watt Solar Panels?

Solar charge controllers play an integral role in solar power systems, making them safe and effective. You can't simply connect your solar panels to a battery directly and expect it to work. Solar panels output more than their nominal voltage. For example, a 12v solar panel might put out up to 19 volts.
