Latvia: Energy intensity: how much energy does it use per unit of GDP? Click to open interactive version. Energy is a large contributor to CO 2 - the burning of fossil fuels accounts for around three-quarters of global greenhouse gas emissions. So, reducing energy consumption can inevitably help to reduce emissions.

2e per year in 2050 in Latvia; Reduces 2050 all-purpose, end-use energy requirements by 59.9%; Reduces Latvia's 2050 annual energy costs by 66.2% (from \$7.1 to \$2.4 bil./y); Reduces annual energy, health, plus climate costs by 90.1% (from \$24 to \$2.4 bil./y); Costs ~\$21 billion upfront. Upfront costs are paid back through energy sales.

After the rapid recovery of the economy from the Covid-19 pandemic crisis in 2021, growth in Latvia slowed down to 3% in 2022. The economic development in 2022 was significantly affected by supply chain disruptions caused by Russia's invasion of Ukraine, the rise in inflation caused by the cost of energy resources and food, as well as the decrease in global demand.
