Behaviour was still weird at that time with one Libbi charging while the other discharged during a period of plenty solar generation. It was agreed that this should never happen. One thing we did was change the Libbi master from no. 1 to no. 2. which at the time seemed to make absolutely no difference.

I have gone through iterations with Zappi, Libbi, and Eddi as master. Libbi struggled to reliably communicate with Harvi to obtain grid ct, and eventually settled on my current set up using channel 3 for all devices to communicate. As far as comms are concerned this has been the most stable set up since July and initial Libbi installation.
