How solar-thermal panels work In theory. Here's a simple summary of how rooftop solar hot-water panels work: In the simplest panels, Sun heats water flowing in a circuit through the collector (the panel on your roof). The water leaving the collector is hotter than the water entering it and carries its heat toward your hot water tank.

You're likely most familiar with PV, which is utilized in solar panels. When the sun shines onto a solar panel, energy from the sunlight is absorbed by the PV cells in the panel. This energy creates electrical charges that move in response to an internal ...

The first part is the power optimizer, which handles DC to DC and optimizes or conditions the solar panel's power. There is one power optimizer per solar panel, and they keep the flow of energy equal. For example, with a standard string inverter, if one solar panel produces less energy, all the solar panels in that string will produce less energy.
