What is solar energy & how does it work?

Solar energy is a clean and renewable energy source harnessing power from the sun without producing harmful pollutants or greenhouse gases. Solar power allows individuals, business and communities to generate their own electricity, leading to reduced dependence on traditional utility grids.

What is solar power?

Solar power is the conversion of sunlight into electricity, either directly using photovoltaic (PV), or indirectly using concentrated solar power (CSP). The research has been underway since very beginning for the development of an affordable, in-exhaustive and clean solar energy technology for longer term benefits.

How does solar PV work?

While the energy source is the same - the sun - the technology in each system is different. Solar PV is based on the photovoltaic effect, by which a photon (the basic unit of light) impacts a semi-conductor surface like silicon and generates the release of an electron.

How do solar panels work?

You're likely most familiar with PV, which is utilized in solar panels. When the sun shines onto a solar panel, energy from the sunlight is absorbed by the PV cells in the panel. This energy creates electrical charges that move in response to an internal electrical field in the cell, causing electricity to flow.
