A lot of people often think of tracking brackets as rigid structures when they're in fact a slender semi-rigid structure. The north-south span of the photovoltaic tracking bracket is relatively large (usually about 30 to 100 meters) and needs to be rotated.

The bracket can be mounted on various types of surfaces including wood, concrete and steel, giving you the flexibility to mount it on almost any surface. The bracket profile is adjustable, allowing you to customize the height and angle of your solar panel installation, ensuring you maximize the power output of your panels.
