What is a solar panel project?

A solar panel project involves installing and utilizing photovoltaic (PV) panels to generate electricity from sunlight. These panels consist of multiple interconnected solar cells that produce direct current (DC) electricity from sunshine.

In 1954, Bell Labs scientists Daryl Chapin, Calvin Fuller, and Gerald Pearson made a practical silicon photovoltaic cell with 4% efficiency. This was later improved to 11%. This innovation led to solar technology becoming commercial. In 1958, the Vanguard I satellite used a small solar array to power its radios, starting solar power in space.
