How much energy does Spain import?

Spain's dependency rate on energy imports stood at roughly 74 percent in 2022, meaning that the country imported almost three-quarters of the total primary energy consumed, while only 25 percent came from domestic sources.

Why did Spain increase its energy imports in 2022?

In 2022, with the hydropower production at low levels due to droughts, Spain increased its energy imports (mostly oil and gas--the highest consumption in the last decade) to 2019 levels at 74 percent. In 2023, the situation improved, with imports decreasing to 70 percent.

What is Spain's energy dependency?

Progress in terms of reducing the share of energy consumed that is imported from another country (%) In the past decade, Spain's energy dependency has been relatively stable between 70 percent and 75 percent.

Why are Spain's energy exports stronger than usual?

Regionally, there have been stronger than usual energy exports due to Spain's energy partnership with France, which experienced a reduction in its available nuclear capacity. Spain is the 8th most attractive market for renewable energy investment as per EY's biannual Renewable Energy Country Attractiveness Index (RECAI) published in June 2023.

Is Spain a good country to buy power?

Spain is also at the top of power purchase agreements (PPA) index, behind Germany, the United States, UK, France, and Australia. The estimated compound annual growth rate (CAGR) of Spain's power market is expected to increase more than 2.8% between 2023 and 2028.
