

What is Switzerland's energy policy?

Switzerland's energy policy includes measures targeting CO<sub>2</sub> emissions, such as the implementation of a CO<sub>2</sub> tax in 2008. Furthermore, in 2021, legislation was passed to reinforce the expansion of domestic renewable energies, aiming to enhance the country's supply security.

What is the SwissEnergy programme?

The SwissEnergy programme, launched in 2001, helps to achieve the goals of Swiss energy policy. The programme's core component is the [energieschweiz.ch](http://energieschweiz.ch) portal (de/fr/it), which provides the public as well as industry actors with comprehensive information on how to transition to renewable energies, improve energy efficiency and save energy.

How is energy used in Switzerland?

Total energy supply (TES) includes all the energy produced in or imported to a country, minus that which is exported or stored. It represents all the energy required to supply end users in the country.

Why is hydroelectric power important in Switzerland?

The high proportion of energy generated through hydroelectric power and the lack of natural resources (such as coal and oil) help to explain why such a situation is strategically beneficial in Switzerland. In 2017, Swiss voters accepted the revised Energy Act, endorsing the implementation of the 2050 Energy Strategy, which principally aims to:

Why is electricity consumption declining in Switzerland?

Since 2015, electricity consumption in Switzerland has been on a downwards trend. The energy transition is currently being implemented in Switzerland through the Energy Strategy 2050, with the goal of climate neutrality.

What is Switzerland's energy balance?

Switzerland's energy balance provides information on domestic production, import / export, storage, conversion, own consumption, transport and grid losses and consumption of the various energy carriers in Switzerland on an annual basis. Anpassung der Heizwerte von Petrolkoks, Steinkohle und Braunkohle in der Gesamtenergiestatistik. Faktenblatt
