Install a PV system using microinverters, and in time a battery backup system can be added. But to do so, there are real considerations to take into account. How will the microinverters and the batteries communicate? Can the system owner monitor both of the PV output and the battery status in one data manager (web or logger)?

Here's why micro inverters are Useful: 1.Enhanced Efficiency: Since each panel works independently, if one panel gets shaded or dirty, it doesn't drag down the performance of the others. This means your system works more efficiently overall. 2.Easy Troubleshooting: If something goes wrong with one panel or its micro inverter, it's easier to identify and fix the ...
