What is the energy storage strategy & roadmap (SRM)?

WASHINGTON, D.C. - The U.S. Department of Energy (DOE) today released its draft Energy Storage Strategy and Roadmap (SRM), a plan that provides strategic direction and identifies key opportunities to optimize DOE's investment in future planning of energy storage research, development, demonstration, and deployment projects.

Is energy storage the future?

The key conclusion of the research is that deployment of energy storage has the potential to increase significantly--reaching at least five times today's capacity by 2050--and storage will likely play an integral role in determining the cost-optimal grid mix of the future.

Why should we invest in energy storage?

The SRM cites the underlying motivation for investment in energy storage as ensuring "that the American people will have the resources needed, when needed." "1. To facilitate safe, beneficial, and timely deployment of energy storage technologies and accelerate the development of new technologies that address current and emerging consumer needs.

Why is DOE investing in energy storage?

The underlying motivation for DOE's strategic investment in energy storage is to ensure that the American people will have access to energy storage innovations that enable resilient, flexible, affordable, and secure energy systems and supply, for everyone, everywhere.

Can energy storage meet the needs of an evolving grid?

Overall, there is an immense opportunity for energy storage to meet the needs of an evolving grid, and it is well-positioned to do so with the existing tax credits and its declining cost curve.

Does the energy storage strategic plan address new policy actions?

This SRM does not address new policy actions, nor does it specify budgets and resources for future activities. This Energy Storage SRM responds to the Energy Storage Strategic Plan periodic update requirement of the Better Energy Storage Technology (BEST) section of the Energy Policy Act of 2020 (42 U.S.C. § 17232 (b) (5)).
