

The electric shear is disconnected and then recharged

How do electric shears work?

Electric shears can be powered by either corded electricity or battery power. Each power source has its own advantages and limitations, so it's important to evaluate your specific needs before making a decision. Corded electric shears offer a consistent and uninterrupted power supply, making them ideal for long cutting sessions.

How to use an electric shear?

Maintaining a secure grip on the electric shears is crucial for safe and effective operation. Make sure to hold the tool with both hands, keeping your fingers away from the cutting area. Ensure that your grip is firm but not too tight, allowing you to have control over the tool while still maintaining comfort.

What should I know before using a shear machine?

SHEAR BLADE ADJUSTMENT. When adjusting or replacing shear blades, always disconnect machine from power, wear heavy leather gloves to protect hands, and wear safety glasses to protect eyes. **CHECK MACHINE.** Before using machine, carefully check components for wear that could affect operation.

Why are my electric shears not cutting well?

Over time, the blades of the shears can become worn down or develop nicks and chips, which can affect their cutting performance. If you notice that your electric shears are not cutting as smoothly as they used to or are leaving jagged edges, it may be a sign that the blades need attention.

What are some common problems with electric shears?

Jammed material is another common problem that can occur when using electric shears. This happens when the shears get stuck in the material being cut, preventing further progress. Jammed material can be frustrating, but it can be resolved with a few troubleshooting steps.

How do I know if my electric shears need repair?

If you notice that your electric shears are not cutting as smoothly as they used to or are leaving jagged edges, it may be a sign that the blades need attention. To troubleshoot this issue, you can start by inspecting the blades for any visible signs of damage. If you notice any chips or nicks, it may be necessary to replace the blades.
