Do energy storage systems cover green energy plateaus?

Energy storage systems must develop to cover green energy plateaus. We need additional capacity to store the energy generated from wind and solar power for periods when there is less wind and sun. Batteries are at the core of the recent growth in energy storage and battery prices are dropping considerably.

How do energy storage systems work?

Energy-storage systems, also known as batteries or thermal stores, allow you to capture heat or electricity when it is available (for example, from a solar PV system during daylight, from a wind turbine when it's windy, or from a log boiler when burning batches of logs), and then save it until a time when it can be useful to you.
