

How does solar radiation affect PV power potential in China?

With the increase of  $1 \text{ W m}^{-2}$  in solar radiation, the PV power potential in China shows a uniform enhancement of  $1.22\text{-}1.41 \text{ kWh m}^{-2}$  (Fig. 8 d). On the national scale, the PV power potential increases by  $1.34 \text{ kWh m}^{-2}$  (0.55 %) per unit  $1 \text{ W m}^{-2}$  solar radiation with almost linear responses to the changes in radiation (Fig. 8 a and Fig. S16).

Why is solar energy underestimated in China?

The missing radiation data over the western domain may lead to the underestimation of the total solar energy in China. Second, the application of 11 PV models reveals an uncertainty of 6-7 % in the estimate of PV power potential.

What is the PV power potential in China?

**Conclusions** We estimated the PV power potential in China using an ensemble of 11 PV models driven by high-resolution satellite data. We predicted a national average PV power potential of  $242.79 \text{ kWh m}^{-2}$  in China for 2016-2019, with the east-to-west gradient from  $219.81 \text{ kWh m}^{-2}$  to  $273.51 \text{ kWh m}^{-2}$ .

Does cloud influence PV power potential in China?

Such a pattern represents the trend of PV power (Fig. S14a) and solar radiation (Fig. S14b) during 2016-2019, which is mainly regulated by the tendency of cloud (Fig. S14c) rather than that of AOD (Fig. S14d). It confirms again that the perturbations of cloud dominate the variability of PV power potential in China.

What is the spatial heterogeneity of solar energy resource in China?

The solar energy resource shows distinct spatial heterogeneity in China. High energy resource is in the west with a regional maximum above  $2000 \text{ kWh m}^{-2}$  over the Tibetan Plateau (Fig. 1 a).

How much solar power does China have?

On the national scale, Feng et al. (2021) derived daily solar radiation at  $0.5^\circ$ ;  $0.5^\circ$  in China based on data at 110 ground sites and estimated an annual mean PV power potential of  $293 \text{ kWh m}^{-2}$  during 1961-2018 using an empirical model.

Cheng Zhang currently works at the Institute of Thermal Energy and Power Engineering, Huazhong University of Science and Technology. Cheng does research in Mechanical Engineering, Industrial ...

A low cost, highly flexible and environmentally friendly water generation method known as interfacial solar steam generation (SSG) has recently been popularized by many researchers due to the continuously ...

Using the recent economic reports and state-of-the-art technological solutions, this survey outlines the latest

trends in the geothermal power generation in China. The application of geothermal power generation in China is still at an ...

My research is focused on high-power micro/millimetre/THz waves with applications in clean energy (nuclear fusion and solar power generation), as well as the applications of THz/optical spectroscopy in astrochemistry, with collaborators at QMUL, in the UK and EU. ... Jin Zhang, Feng Wang, Huiyu Yuan, Pu Wei, Xiaohan Sun\*, Yanmei Wang, Bo Chen ...

The peak of PV power generation appears in summer with the maximum solar radiation for most regions except for Tibet, where the high cloud coverage dampens the PV power in summer. The ensemble prediction shows the uniform inter-model spread in China with a magnitude of 6 %-7 %, suggesting a robust estimate of the spatial pattern in the PV power ...

Besides, a collaborative device integrating CPP3 and a commercial thermoelectric (TE) generator is designed for synchronous generation of solar steam and thermoelectricity, which can simultaneously achieve an evaporation rate of 1.39 kg m<sup>-2</sup> h<sup>-1</sup> and a power output of 0.5 W m<sup>-2</sup> under one sun illumination. Such a cost-effective and easy-to ...

Metal oxides are widely used in many applications such as thermoelectric, solar cells, sensors, transistors, and optoelectronic devices due to their outstanding mechanical, chemical, electrical, and optical properties. For instance, their high Seebeck coefficient, high thermal stability, and earth abundancy make them suitable for

thermoelectric power ...

For China, some researchers have also assessed the PV power generation potential. He et al. [43] utilized 10-year hourly solar irradiation data from 2001 to 2010 from 200 representative locations to develop provincial solar availability profiles was found that the potential solar output of China could reach approximately 14 PWh and 130 PWh in the lower ...

The single bulk-heterojunction active layer based on non-fullerene acceptors (NFAs) has dominated the power conversional efficiencies above 18% in state-of-the-art organic solar cells (OSCs). However, a deep understanding of the relationship between charge carrier process and film microstructure remains unclear for emerging NFA OSCs. Herein, with the ...

The power consumption of the DC cooling system is modelled using a coefficient model, which considers the cooling system energy consumption to be directly related to its servers' energy consumption, and is characterized using a load factor (LF), as shown in Equation (). LF is defined as the ratio of DC's IT equipment energy consumption to cooling system ...
